

SHARE AND USE DATA OVER FIBRE CHANNEL & iSCSI WITH SANmp v.3.0

1986 innerbelt business center dr. | toll free | fax | los angeles | new york | saint louis, missouri 63114 usa | 877.537.2094 | 314.733.0537 | 818.209.1331 | 631.375.3647

- Mac + PC
- Requires no metadata controllers
- Share iSCSI and Fibre Channel
- Easy to setup and use
- Compatible with Final Cut Pro, Avid, Pro Tools, Adobe Premiere Pro, and many others

SANmp enables all of your workstations to share massive amounts of data over high-speed Fibre Channel and iSCSI Storage Networks, resulting in a dramatically improved workflow.

With SANmp high performance volume sharing software, all users can capture, record and edit directly onto a shared storage system, eliminating the need to copy files locally.

SANmp Overview

SANmp requires no servers or metadata controllers, which makes it a perfect choice for companies that need a SAN sharing solution that requires minimal administrative overhead.

SANmp is simple to install and easy to use, meaning it can transform a SAN into a shared storage system within minutes. It's perfect for professionals working with video and film, sound editing, digital effects and motion graphics.

Complete Integration with postmap®

Interact with your storage system using the most intelligent operating environment ever created for production workgroups!

Postmap helps your team search, locate, tag, and preview all types of assets on your shared storage and removable storage media. With postmap, you can easily add custom metadata to any file on any device, and then share that information with everyone in your workgroup.

Now, all of the features of SANmp Client are completely integrated into postmap – giving you the most robust shared storage environment ever created for Mac and Windows!

This means that you can:

- > Mount and unmount SANmp volumes
- > Search for files on your entire storage system
- > Preview online media clips
- > Build shared, custom metadata templates
- > Track workflow with custom-designed project templates
- > Check capacity and free space of *all* storage devices
- > Perform automation with CLI scripts
- > Send instant messages to others in your workgroup

ALL FROM WITHIN ONE APPLICATION – POSTMAP

If you already have SANmp, you can seamlessly upgrade to postmap and begin taking advantage of the most robust shared storage environment available!

TRY POSTMAP TODAY!

Responsive technical support plans that offer coverage around the clock.
**One source.
 One solution.**

Each license of SANmp Admin also includes one license of SANmp Client. At least one license of SANmp Admin is required per shared storage workgroup SAN.

If you intend to share HFS+ partitions with Windows computers, you must first install a file system translation utility such as Mac Drive.

SANmp does not include the Windows iSCSI initiator. However, it is available via free download from Microsoft.

Windows XP Professional is strongly recommended over Windows XP Home Edition. Windows XP Home Edition does not support dynamic disks.

Specifications, images and prices are subject to change without notice.
